Single Source of Truth: OPC Registration, Legal Structure, GST, Payments, IP, and Product Ownership for MenuList + Answerlattice

1. Purpose of This Document

This document defines the agreed registration and operating structure for launching and managing multiple SaaS/software products, starting with:

- MenuList
- Answerlattice
- Future products under the same parent company

The purpose is to create one clear legal, tax, payment, ownership, and operational structure so the founder does not need to revisit prior discussions or make fragmented decisions during CA/CS consultation.

This document should be used as the reference document when speaking with:

- CA
- CS
- Trademark/IP consultant
- Payment gateway onboarding team
- Bank/current account team
- Future legal advisor

The goal is not just to register a company. The goal is to create a stable legal base for a multi-product SaaS business.

---

2. Final Strategic Decision

The final decision is:

```
Register one neutral OPC as the parent company.
Use it to operate MenuList, Answerlattice, and future products.
```

The company should not be named after MenuList or Answerlattice.

Correct structure:

```
[Neutral Parent Name] OPC Private Limited
|
├── MenuList
├── Answerlattice
└── Future products
```

MenuList and Answerlattice will remain separate products with separate websites, positioning, pricing, product databases, and customer journeys.

But legally, they will be operated by one parent OPC.

Example footer structure:

```
MenuList is operated by [Parent Company Name] OPC Private Limited.

Answerlattice is operated by [Parent Company Name] OPC Private Limited.
```

---

3. Why OPC Was Chosen

Private Limited was considered, but rejected for now because it requires involving at least two people as members/directors, and the founder does not want to involve an external or unnecessary person at this stage.

Proprietorship was considered, but rejected because it is too weak for this business context.

The business is not a small local freelance business. It is a multi-product SaaS/software business with:

- recurring payments
- customer data
- public-facing products
- AI/software systems
- possible global customers
- future product expansion
- future private limited conversion possibility
- possible future investors/team/partnerships

Therefore:

```
OPC is the best bridge structure.
```

It gives:

- single-person company structure
- better credibility than proprietorship
- company PAN

- company bank account
- payment gateway readiness
- limited liability structure
- cleaner product/IP ownership
- future conversion path to Private Limited

Final ranking:

```
1. Private Limited — best final structure, but not suitable now due to two-person requirement
2. OPC — best current structure
3. Proprietorship — avoid for this use case
```

---

4. Final Ownership and Family Structure

The company will be registered in the mother's name.

Final intended structure:

```
Mother = sole member / legal owner
Mother = first director
Founder = nominee
Founder + brother = operationally involved in running the products
```

Important clarification:

An OPC normally has one official nominee. Both founder and brother cannot both be official nominees in the standard OPC nominee structure.

Therefore:

```
Official nominee should be one person only.
```

Final recommendation:

```
Founder should be the official nominee.
Brother should be formally authorised as operator / employee / consultant / admin / signatory where appropriate.
```

The nominee does not own the company immediately. The nominee only becomes member if the sole member dies or becomes incapable.

So the intended structure is:

```
Mother = legal owner today
Founder = official nominee for continuity
Founder + brother = business/product operators
```

---

5. Critical Warning About Registering on Mother’s Name

Because the OPC is being registered in the mother’s name, the following must be understood clearly:

```
The company legally belongs to the mother until ownership changes.
```

This means:

- Mother is the legal member/owner.
- Mother is the director.
- Mother’s PAN/KYC is connected.
- Mother’s name appears in MCA records.
- Mother may need to sign incorporation, bank, GST, and payment gateway documents.
- Mother may receive official notices.
- Mother’s compliance profile may be affected.
- Bank verification and KYC may involve her.
- Payment gateway verification may involve her.
- GST registration may involve her as authorised signatory/director.

This should not be treated as a “name-only” setup.

The company must either be genuinely operated through this structure, or proper legal authorisation must be created for the founder and brother.

---

6. Required Internal Legal Clarity

Since the products are built and operated by founder/brother, but the company is owned by mother, the following must be documented properly.

The CA/CS/legal advisor should help create or advise on:

```
1. Founder IP assignment to OPC
2. Brother IP assignment or work agreement, if brother contributes
3. Authorisation letter for founder to operate company/product systems
4. Authorisation letter for brother to operate company/product systems
5. Board resolution for payment gateway/bank operations
6. Contract/consulting/employment arrangement if needed
7. Future conversion path to Private Limited
```

This is important because otherwise there can be confusion later:

- Who owns MenuList code?
- Who owns Answerlattice code?
- Who owns domains?
- Who owns trademarks?
- Who owns product content?
- Who owns GitHub repositories?
- Who owns Firebase projects?
- Who owns Vercel/hosting accounts?
- Who owns customer contracts?
- Who owns product revenue?

The clean answer should be:

```
The parent OPC owns the products, code, brands, domains, trademarks, customer contracts, and revenue rights.
Founder and brother are authorised operators/contributors.
```

---

7. Registered Office Decision

The business address / registered office should be:

```
Mother’s own house in hometown.
```

This is preferred over the founder/brother’s rented city address.

Reasons:

- Mother is the legal owner/director.
- The house is owned/family-owned, so address is stable.
- Rented address creates dependency on landlord NOC.
- If rented flat changes, company address has to be changed.
- Registered office changes create extra MCA/GST/bank/payment gateway work.
- A residential address can be used if proper documents and NOC/consent are available.
- For SaaS/software business, remote operation from another city is acceptable operationally.

Final structure:

```
Registered Office = mother’s own house in hometown
Principal Place of Business for GST = same address, unless CA advises otherwise
Operational Work = founder and brother work remotely from rented city
```

8. Registered Office Documents Needed

If mother owns the house:

```
1. Recent electricity bill / water bill / property tax receipt
2. Ownership proof if available
3. NOC/consent letter from mother allowing the OPC to use the premises
4. Mother’s PAN
5. Mother’s Aadhaar
6. Address proof matching or supporting the registered office address
```

If the house is owned by another family member:

```
1. Recent electricity bill / water bill / property tax receipt
2. Ownership proof if available
3. NOC/consent letter from actual owner
4. Owner’s PAN/Aadhaar if required
5. Mother’s PAN/Aadhaar
```

If the house is jointly owned:

```
1. Utility bill
2. Ownership proof if available
3. NOC from relevant owner(s), if CA/CS asks
```

Ask CA/CS:

```
Can we use mother’s owned residential house as registered office and GST principal place
of business for an OPC running SaaS/software products?
What exact registered office documents are needed for MCA and GST?
```

MCA Check

CA/CS should check whether the proposed company name is available under MCA and not too similar to existing company/LLP names.

Check:

- exact match
- similar spelling
- plural/singular
- phonetic similarity
- industry similarity

- same suffix
- same distinctive word

Trademark Check

Search the parent name on IP India trademark public search.

Relevant classes:

```
Class 42 = SaaS, software services, software development, technology services
Class 9 = downloadable software, apps, software products
```

For the parent company, Class 42 is the most important.

Domain Check

Try to secure:

```
parentname.com
parentname.in
parentnamesystems.com
parentnametech.com
```

A premium domain is not mandatory for the parent company, but the name should not be clearly blocked.

Social Handle Check

Minimum check:

```
LinkedIn
X/Twitter
GitHub
YouTube
Instagram
```

Parent company can remain low profile, but basic ownership of handles is useful.

---

11. Product Brand and Trademark Strategy

There are three separate naming/IP layers:

```
1. Parent company name
2. Product names
3. Product logos/visual identities
```

Current product names:

```
MenuList
Answerlattice
```

The product trademarks should ideally be filed in the name of the OPC after incorporation.

Preferred trademark filing order:

```
1. MenuList wordmark — Class 42
2. Answerlattice wordmark — Class 42
3. Parent company wordmark — Class 42, if parent name is important externally
4. Logo trademarks later
5. Class 9 later if mobile/downloadable apps become important
```

Wordmark should be prioritised over logo trademark.

Reason:

- Product names are durable.
- Logos may change.
- Wordmark protects the name more broadly.
- Logo trademark is useful only after visual identity becomes stable.

Recommended trademark owner:

```
Applicant = [Parent Company Name] OPC Private Limited
Trademark = MenuList
Class = 42
```

```
Applicant = [Parent Company Name] OPC Private Limited
Trademark = Answerlattice
Class = 42
```

Avoid filing product trademarks personally unless an IP lawyer specifically advises temporary filing and later assignment.

Cleanest path:

```
Incorporate OPC first.
Then file MenuList and Answerlattice trademarks under OPC.
```

---

12. Logo and Brand Asset Ownership

Company registration does not protect the logo automatically.

Logo/brand assets should be handled separately.

For each product:

```
MenuList logo
Answerlattice logo
Parent company logo, if any
```

Keep:

- source files
- design files
- export files
- font/license records
- AI generation records if relevant
- designer invoices if relevant
- IP assignment from designer if designer was involved

If a designer creates a logo, do not rely only on payment. Get written assignment:

```
All rights, title, and interest in the logo, design files, brand assets, and derivative
usage rights are assigned to [Parent Company Name] OPC Private Limited.
```

Do not file logo trademark until the logo is stable.

Priority:

```
Wordmark first.
Logo trademark later.
```

---

13. OPC Registration Process

The CA/CS should handle incorporation through the MCA process.

Expected high-level steps:

```
1. Finalise company name
2. Obtain DSC for proposed director
3. Reserve/name-apply through SPICe+ Part A or incorporation flow
4. Prepare SPICe+ Part B
5. Prepare e-MOA
6. Prepare e-AOA
7. Prepare AGILE-PRO-S if applicable
8. Prepare nominee consent INC-3
9. Submit incorporation forms
10. Receive Certificate of Incorporation
11. Receive CIN
12. Receive company PAN
13. Receive company TAN
```

The CA/CS should confirm exact current MCA flow and forms.

---

14. Documents Needed From Mother

Mother will be the sole member and director.

Collect:

```
1. PAN card
2. Aadhaar card
3. Passport-size photo
4. Email ID
5. Mobile number
6. Address proof
7. Recent bank statement, if required
8. Utility bill, if used as address support
9. Digital Signature Certificate — to be obtained
10. Director Identification Number — handled through incorporation, if applicable
```

Address proof can include:

```
Aadhaar
Passport
Voter ID
Driving licence
Bank statement
Utility bill
```

CA/CS should confirm exact acceptable document set.

15. Documents Needed From Founder as Nominee

Founder will be the preferred nominee.

Collect:

```
1. PAN card
2. Aadhaar card
3. Passport-size photo
4. Address proof
5. Email ID
6. Mobile number
7. Signed nominee consent — INC-3
```

The nominee is not the present owner. The nominee is continuity backup.

The nominee should understand:

```
If the sole member dies or becomes incapable, nominee may become the member of the OPC.
```

---

16. Documents Needed From Brother

Brother is not the official nominee if founder is nominee.

But brother may be formally involved as:

- operator
- employee
- consultant
- authorised admin
- product contributor
- signatory if allowed
- future director/shareholder after conversion

Collect from brother if formal authorization is planned:

```
1. PAN card
2. Aadhaar card
3. Passport-size photo
4. Address proof
5. Email ID
6. Mobile number
7. Agreement/authorization documents prepared by CA/CS/legal advisor
```

Ask CA/CS how brother can be formally authorised without making him member/nominee.

---

17. Documents Needed for Registered Office

For mother's hometown own house:

```
1. Latest electricity bill OR water bill OR property tax receipt
2. Ownership proof if available
3. NOC/consent letter from owner
4. Address proof matching the premises
```

If the property is in mother's name, she can provide consent.

If the property is in another family member's name, that owner should provide consent/NOC.

Ask CA/CS to prepare proper NOC format.

---

18. Post-Incorporation Documents Expected

After successful OPC registration, preserve these permanently:

```
1. Certificate of Incorporation
2. CIN
3. Company PAN
4. Company TAN
5. MOA
6. AOA
7. Name approval record
8. INC-3 nominee consent copy
9. Registered office proof
10. DSC records
11. Incorporation challans/receipts
```

Create a secure folder:

```
Company Master Documents
```

Suggested folder structure:

```
/company-legal
  /incorporation
  /pan-tan
  /moa-aoa
  /registered-office
  /nominee
  /director-kyc
  /gst
  /bank
  /razorpay
  /trademarks
  /ip-assignment
  /contracts
```

---

19. Current Account Opening

After incorporation, open a current account in the company's name.

Expected documents:

```
1. Certificate of Incorporation
2. Company PAN
3. MOA
4. AOA
5. Board resolution / account opening authorisation
6. Mother's PAN
7. Mother's Aadhaar
8. Mother's photo
9. Registered office proof
10. Company seal if bank asks
11. Mobile/email OTP access
```

Since mother is director, the bank may require her presence, video KYC, signatures, or OTP access.

Ask bank/CA:

```
Can founder and brother be added as authorised users/operators/signatories?
What documents are needed?
Can founder manage net banking/payment gateway operations?
```

20. GST Strategy

This is a SaaS/software business with both Indian and potential global customers.

Discuss GST with CA specifically in that context.

Questions to ask:

```
1. Should GST be registered immediately or after crossing threshold?
2. Does Razorpay/payment gateway onboarding require GST for our use case?
3. How do we invoice Indian SaaS customers?
4. What GST rate applies to our products/services?
5. How do we treat global customers?
6. Can global SaaS revenue qualify as export of services?
7. When do we need LUT?
8. How do we maintain FIRC/BRC/payment records?
9. How do we handle INR vs USD invoices?
10. What should invoice format look like?
11. What GST return filing frequency applies?
12. What are annual compliance costs?
```

Do not let this be treated like a normal local service business.

Use this wording with CA:

```
This is a SaaS/digital software product business. We will sell subscriptions to Indian
customers and possibly global customers. We need GST guidance for domestic SaaS, export
of services, LUT, invoices, payment gateway settlement, and accounting records.
```

21. GST Documents Needed

Expected GST documents:

```
1. Company PAN
2. Certificate of Incorporation
3. MOA
4. AOA
5. Mother’s PAN
6. Mother’s Aadhaar
7. Mother’s photo
8. Registered office proof
9. NOC/consent letter for premises
10. Bank account proof
11. Cancelled cheque / bank statement
12. Authorisation letter / board resolution for authorised signatory
13. Email ID
14. Mobile number
```

GST principal place of business should likely be:

```
Mother’s own house in hometown
```

unless CA advises a better structure.

---

22. Payment Gateway Strategy

Primary payment gateway:

```
Razorpay
```

Reason:

- Indian SaaS payments
- UPI/cards/netbanking support
- subscriptions/payment links
- Indian entity onboarding
- potential international payment activation subject to approval

Stripe is not the primary immediate plan because Stripe India availability for new accounts may be restricted/invite-based. It can be explored later.

Payment gateway path:

```
1. Incorporate OPC
2. Open current account
3. Prepare website legal pages
4. Register GST if advised/needed
5. Activate Razorpay
6. Enable subscriptions
7. Enable international payments if approved
8. Explore Stripe later if available
9. Explore Merchant of Record only if global tax/payment complexity becomes serious
```

---

23. Razorpay Documents and Readiness

Expected Razorpay/KYC requirements:

```
1. Certificate of Incorporation
2. Company PAN
3. Company bank proof
4. Cancelled cheque / bank statement
5. MOA
6. AOA
7. GST certificate if available/applicable
8. Mother’s PAN
9. Mother’s Aadhaar/address proof
10. Authorised signatory details
11. UBO/control person details
12. Business address
13. Business phone number
14. Business email
15. Website URL
16. Pricing page
17. Terms page
18. Privacy policy
19. Refund/cancellation policy
20. Contact page
```

Business description for Razorpay:

```
The company operates SaaS products for SMB business information management and product
support knowledge management.
```

Product-specific descriptions:

```
MenuList is a SaaS product that helps businesses manage and publish customer-facing
business information, menu data, public business pages, and related discovery surfaces.

Answerlattice is a SaaS product that helps software/product owners manage support
knowledge, FAQs, docs, feedback, tickets, changelogs, and customer-facing support
surfaces.
```

Keep the payment gateway description simple and non-confusing.

---

24. Product Legal Pages Needed

Before payment gateway activation, each product should have proper legal pages.

MenuList must have:

```
1. Terms of Service
2. Privacy Policy
3. Refund/Cancellation Policy
4. Pricing Page
5. Contact Page
6. About/Company footer
```

Answerlattice must have:

```
1. Terms of Service
2. Privacy Policy
3. Refund/Cancellation Policy
4. Pricing Page
5. Contact Page
6. About/Company footer
```

Preferred structure:

```
Separate product-specific terms/privacy pages.
Same legal operator.
```

Footer format:

```
MenuList is operated by [Parent Company Name] OPC Private Limited.
Registered Office: [Registered Office Address]
Contact: [Company/Product Email]
```

```
Answerlattice is operated by [Parent Company Name] OPC Private Limited.
Registered Office: [Registered Office Address]
Contact: [Company/Product Email]
```

---

25. Product-Wise Accounting and Metadata

Even though one OPC operates all products, each product must be tracked separately internally.

Required payment metadata:

```
legal_entity = [Parent Company Name] OPC Private Limited
product = menulist / answerlattice
invoice_prefix = ML / AL
plan = product plan name
currency = INR / USD / other
customer_country = country
gst_treatment = domestic / export / exempt / as advised by CA
gateway = razorpay / stripe / other
payment_status = paid / failed / refunded
subscription_id = gateway subscription ID
```

Invoice prefix structure:

```
ML-0001 = MenuList invoice
AL-0001 = Answerlattice invoice
```

Do not mix product revenue without product tags.

This will help later with:

- accounting
- GST
- product profitability
- investor reporting
- future separation
- future sale/spin-off
- conversion to Private Limited

---

26. Firebase, GitHub, Domains, Hosting, and Product Account Ownership

All critical product infrastructure should eventually belong to the OPC, not personal accounts only.

Accounts to review:

```
1. Domain registrar accounts
2. Firebase projects
3. Google Cloud projects
4. GitHub repositories/organizations
5. Vercel/hosting accounts
6. Razorpay account
7. Email/domain workspace
8. Analytics accounts
9. WhatsApp Cloud API/Meta business accounts
10. API keys and AI provider accounts
11. Trademark accounts
12. Design files/assets
```

Preferred long-term structure:

```
Company-owned email controls company/product accounts.
Founder and brother have admin access.
No single personal account should be the only owner.
```

Suggested company emails:

```
legal@[parentdomain]
accounts@[parentdomain]
support@[productdomain]
admin@[parentdomain]
founder@[parentdomain]
```

If not ready immediately, at least document current ownership and migration plan.

---

27. IP Assignment and Product Ownership

This is mandatory because company is in mother’s name but products are built by founder/brother.

Create an IP ownership record.

Items to assign to OPC:

```
1. MenuList codebase
2. Answerlattice codebase
3. Product names
4. Product logos
5. Product designs
6. Product documentation
7. Product databases/schemas
8. Product website content
9. Product marketing assets
10. Product domains
11. Product repositories
12. AI prompts/workflows if material
13. Business processes
14. Customer contracts
```

Ask legal advisor/CA:

```
Can you prepare Founder IP Assignment Agreement transferring MenuList and Answerlattice
product IP to the OPC?
Can brother’s contributions be covered through a contributor/IP assignment or consulting
agreement?
Can we prepare a board resolution authorising founder and brother to operate product
accounts?
```

Goal:

```
No future ownership confusion.
```

---

28. Future OPC to Private Limited Conversion

OPC is the current bridge structure.

Future conversion to Private Limited should happen when there is a real reason, such as:

```
1. Cofounder joins formally
2. Investors become interested
3. ESOP/team equity is needed
4. Brother/founder need formal shareholding
5. Enterprise contracts require stronger structure
6. Larger financing/banking requirements arise
7. Strategic acquisition/sale path becomes relevant
```

Do not convert just because Private Limited sounds better.

Ask CA/CS:

```
If we later convert OPC to Private Limited, what happens to:
1. PAN
2. GST
3. Bank account
4. Razorpay account
5. Customer contracts
6. Trademarks
7. Domains
8. Existing invoices
9. Accounting history
10. Directorship
11. Shareholding
12. Authorised signatories
```

The company should be structured now to make future conversion clean.

---

29. Compliance Calendar to Ask CA/CS

Ask CA/CS for exact annual compliance obligations and cost.

Topics:

```
1. MCA annual filing
2. Income tax return
3. GST returns
4. TDS, if applicable
5. Accounting/bookkeeping
6. Board minutes/resolutions
7. Director KYC
8. Professional tax, if applicable in state
9. Trademark filing/status monitoring
10. Bank/current account compliance
11. Payment gateway compliance
12. LUT/export compliance if global revenue starts
13. Any state-specific registrations
```

Ask for:

```
Monthly cost
Annual cost
One-time setup cost
GST filing cost
MCA filing cost
Trademark filing cost
Accounting/bookkeeping cost
Penalty risks
Due dates
```

Do not start without understanding recurring compliance cost.

---

30. CA/CS Meeting Script

Use this exact script:

```
We want to register one neutral OPC for a multi-product SaaS/software business.

The company will operate MenuList, Answerlattice, and future software products.

The sole member and first director will be my mother.

I want to be the official nominee.

My brother and I will operate the products day to day.

The registered office should be my mother’s own house in our hometown.

The business will sell software/SaaS subscriptions to Indian customers and potentially global customers.

We need the structure to support Razorpay, GST, future international payments, product-wise accounting, trademark ownership, IP ownership, and future conversion to Private Limited.

Please advise the exact documents, compliance requirements, authorisation documents, GST strategy, payment gateway readiness, and future conversion path.
```

31. Specific Questions to Ask CA/CS

OPC Structure

```
1. Can mother be sole member and director?
2. Can founder be nominee?
3. Can brother be formally authorised without being nominee/member?
4. Can founder and brother be added as authorised operators/signatories?
5. Is an additional director possible/advisable in OPC?
6. What documents are needed from each person?
```

Registered Office

```
1. Can mother’s own residential house be used as registered office?
2. Can same address be GST principal place of business?
3. What utility bill/ownership proof/NOC is needed?
4. What happens if physical verification happens?
```

Name

```
1. Please check MCA name availability.
2. Please check similar company/LLP names.
3. Please check restricted words.
4. Please advise if “Systems” / “Technologies” / “Labs” is better.
```

GST

```
1. Should we register GST immediately?
2. What GST treatment applies to Indian SaaS subscriptions?
3. How do we handle global SaaS customers?
4. When do we need LUT?
5. What invoice format should we use?
6. What return filing frequency applies?
7. What records are needed for export revenue?
```

Payments

```
1. What documents will Razorpay need for OPC?
2. Should GST be completed before Razorpay?
3. Can founder be authorised to operate Razorpay account?
4. Can international payments be enabled later?
5. What bank/current account setup is best?
```

IP/Trademark

```
1. Should trademarks be filed after OPC incorporation?
2. Should MenuList and Answerlattice wordmarks be filed in Class 42?
3. Is Class 9 needed now or later?
4. Can you prepare IP assignment from founder/brother to OPC?
5. Should domains be transferred to OPC ownership?
```

Future Conversion

```
1. What is the OPC to Private Limited conversion process?
2. What documents are needed later?
3. Does conversion affect GST/PAN/bank/Razorpay?
4. How can founder and brother become shareholders later?
```

---

32. Documents Collection Checklist

Mother

```
PAN card
Aadhaar card
Passport-size photo
Email ID
Mobile number
Address proof
Bank statement if required
DSC to be obtained
```

Founder

```
PAN card
Aadhaar card
Passport-size photo
Address proof
Email ID
Mobile number
INC-3 nominee consent
```

Brother

```
PAN card
Aadhaar card
Passport-size photo
Address proof
Email ID
Mobile number
Authorization/contributor/employment/consulting agreement if needed
```

Registered Office

```
Electricity bill / water bill / property tax receipt
Ownership proof if available
NOC/consent letter
Owner KYC if required
```

Company Name

```
3–5 proposed company names
Preferred suffix: Systems / Technologies / Labs
Domain availability notes
Trademark search notes
```

Product Assets

```
MenuList domain details
Answerlattice domain details
GitHub repo ownership
Firebase project ownership
Vercel/hosting ownership
Logo source files
Product website links
Product pricing pages
Product descriptions
```

---

33. Execution Order

Follow this exact order.

Stage 1: Internal Finalisation

```
1. Choose final nominee: founder recommended.
2. Confirm mother agrees to be real legal owner/director.
3. Confirm brother’s operational role.
4. Choose registered office: mother’s own house.
5. Prepare 3–5 parent company name options.
6. Collect documents from mother, founder, brother.
```

Stage 2: Name and IP Check

```
1. MCA name search.
2. Trademark search for parent name.
3. Trademark search for MenuList.
4. Trademark search for Answerlattice.
5. Domain check for parent name.
6. Social handle check.
```

Stage 3: OPC Incorporation

```
1. Obtain DSC.
2. Prepare SPICe+ forms.
3. Prepare e-MOA/e-AOA.
4. Prepare INC-3 nominee consent.
5. Attach registered office proof/NOC.
6. Submit incorporation.
7. Receive COI, CIN, PAN, TAN.
```

Stage 4: Post-Incorporation Setup

```
1. Create company document folder.
2. Open current account.
3. Prepare board resolutions/authorisations.
4. Register GST if advised.
5. Prepare product legal pages.
6. Prepare payment gateway docs.
```

Stage 5: Product/Payment Readiness

```
1. Add company footer to MenuList and Answerlattice.
2. Add Terms, Privacy, Refund, Contact, Pricing pages.
3. Activate Razorpay.
4. Configure product-wise payment metadata.
5. Configure invoice prefixes: ML and AL.
6. Enable subscriptions.
7. Later request international payments.
```

Stage 6: IP Protection

```
1. Transfer/assign MenuList and Answerlattice IP to OPC.
2. File MenuList wordmark in Class 42.
3. File Answerlattice wordmark in Class 42.
4. File parent company wordmark if needed.
5. File logo marks later after brand is stable.
```

Stage 7: Long-Term Structure

```
1. Maintain compliance calendar.
2. Keep product-wise accounting.
3. Keep company-owned product accounts.
4. Convert OPC to Private Limited only when needed.
```

---

34. Do Not Do These Things

Do not:

```
1. Register proprietorship for this business.
2. Name the company after MenuList or Answerlattice.
3. Use rented address unless necessary.
4. Leave brother/founder roles informal forever.
5. Keep product IP personally owned without assignment.
6. Mix MenuList and Answerlattice revenue without metadata.
7. Activate payment gateway before legal pages are ready.
8. File logo trademark before wordmark.
9. Buy every domain extension unnecessarily.
10. Convert to Private Limited without a real reason.
11. Treat mother’s name as a dummy arrangement.
12. Ignore GST/export treatment before global payments.
```

35. Final Operating Model

The intended final operating model is:

```
[Neutral Parent Name] OPC Private Limited
Registered Office: Mother’s own house in hometown
Sole Member: Mother
Director: Mother
Nominee: Founder
Operators: Founder + Brother
Products: MenuList, Answerlattice, future products
Bank Account: Company current account
GST: Company GST, as advised
Payment Gateway: Razorpay first
Global Payments: Razorpay international / Stripe later if available / MoR later if
needed
IP Owner: OPC
Trademarks: Filed under OPC
Invoices: Product-wise prefixes ML and AL
Future: Convert OPC to Private Limited when strategically necessary
```

36. Final Instruction for CA/CS

The CA/CS should not treat this as a simple local business registration.

This is a multi-product SaaS/software company structure.

The registration should support:

```
1. Multiple software products
2. Indian and global customers
3. Razorpay/payment gateway onboarding
4. GST and export-service treatment
5. Product-wise accounting
6. Trademark ownership
7. IP assignment
8. Remote operation by founder and brother
9. Registered office at mother’s hometown address
10. Future OPC to Private Limited conversion
```

The CA/CS should provide:

```
1. Exact registration document list
2. OPC incorporation process
3. Compliance calendar
4. GST strategy
5. Bank/current account process
6. Razorpay readiness checklist
7. IP/trademark filing plan
8. Authorisation structure for founder and brother
9. Future Private Limited conversion guidance
10. Estimated one-time and annual costs
```

This document is the baseline. Any deviation should be documented with reason.
