

ReferFlow

CEO Product Approval Plan

Plug-and-play referral program module for billing, POS, and appointment SaaS platforms.

Source aligned with: Referral Program Module - Product Requirements Document.pdf

Core promise: paid customer refers friend through a form; friend completes first paid order or appointment; invoice is paid; rewards are issued; admin sees revenue and reward cost.

1. CEO Summary

ReferFlow helps businesses turn happy paid customers into trackable new paid customers. The product stays aligned with the source PDF: existing customers submit friend details, the system tracks the referred customer journey, and rewards are issued only after the referred customer completes their first successful paid order or appointment and the invoice is paid.

This is not a new POS, appointment system, CRM campaign tool, influencer platform, or broad loyalty product. It is a referral program module that can sit inside or beside systems such as ReSpark for salons and Devourin for restaurants.

Approval ask: approve the product direction, approve the prototype scope, and approve a pilot with salon/spa and restaurant workflows where customer identity is available.

2. PDF Alignment Contract

The prototype and product plan must preserve these exact source-PDF requirements:

- Admin menu: Settings -> Referral Program.
- Trigger service/event: ReferralInvitationService.
- Trigger options: Order Completed, Appointment Completed, Invoice Paid; recommended selected trigger is Invoice Paid.
- Referral invitation delivery channels: WhatsApp Message, SMS, Email, App Notification.
- Referral form fields: Friend Name, Mobile Number, Email Optional; support multiple referrals.
- Visible lifecycle: Pending -> Contacted -> Registered -> Appointment Booked -> Appointment Completed -> Invoice Paid -> Qualified -> Rewarded.
- Rejected states: Pending -> Duplicate -> Invalid -> Cancelled.
- Qualification rules: first visit only, first paid invoice only, minimum invoice amount, maximum reward per customer, reward expiry days.
- Reward options in admin: Wallet Credit, Fixed Discount, Percentage Discount, Loyalty Points.
- PDF overview mentions cashback; show it only as disabled/roadmap until payout, tax, fraud, and reconciliation rules are approved.

3. Product Flow

Step	Actor	What Happens	Status / Output
1	Existing customer	Completes order or appointment; invoice/bill is paid.	Eligible for referral invitation
2	System	Runs ReferralInvitationService.	Invitation prepared
3	System	Sends/shows invitation through WhatsApp, SMS, Email, or App Notification.	Contact channel visible
4	Customer	Submits friend name, mobile number, optional email; can add multiple friends.	Referral status: Pending
5	System	Creates referral record with referrer and prospect details.	Admin referral record visible
6	System	Marks contacted after allowed message/contact attempt.	Status: Contacted
7	Referred customer	Registers using matching mobile/email.	Status: Registered
8	Referred customer	Books appointment or places order.	Status: Appointment Booked / Order Placed
9	Referred customer	Completes appointment/order and pays invoice.	Status: Invoice Paid
10	System	Checks first visit, first paid invoice, minimum invoice, fraud rules.	Status: Qualified or rejected
11	System	Issues configured rewards and updates reports.	Status: Rewarded

4. Owner Onboarding And Usage

A salon or restaurant owner should not need to replace their billing system. ReferFlow should feel like a plug-in module inside the tools they already use.

Stage	Owner Experience
Onboard	Owner opens ReferFlow or enables it from partner SaaS. Chooses business type: Salon/Spa, Restaurant, Clinic, Other.
Connect	Owner selects billing/POS software such as ReSpark, Devourin, custom API/webhook, CSV import, or manual mode.
Configure	Owner sets referrer reward, referred customer reward, minimum invoice, first visit only, first paid invoice only, max reward, expiry, trigger, and channels.
Go live	Program turns ON. ReferralInvitationService starts after the configured trigger, normally Invoice Paid.
Operate	Owner checks dashboard, referral list, fraud queue, reward distribution, and report/export.

5. Admin Settings

Prototype screen path: Settings -> Referral Program.

Section	Required Fields
Enable Program	Enable Referral Program: Yes/No.
Referrer Reward	Reward Type dropdown: Wallet Credit, Fixed Discount, Percentage Discount, Loyalty Points. Reward Amount: example INR 100.
Referred Customer Reward	Reward Type dropdown: Wallet Credit, Fixed Discount, Percentage Discount, Loyalty Points. Reward Amount: example INR 100.
Qualification Rules	Minimum Invoice Amount, First Visit Only, First Paid Invoice Only, Maximum Reward Per Customer, Reward Expiry Days. Example minimum invoice: INR 500.
Referral Trigger	Order Completed, Appointment Completed, Invoice Paid. Recommended: Invoice Paid.
Delivery Channels	WhatsApp Message, SMS, Email, App Notification.
Cashback Note	Visible only as disabled/roadmap until payout rules are approved.

6. Rewards And Fraud Protection

Area	CEO Message
Reward timing	No reward is issued at referral submission, registration, or booking. Rewards are issued after first paid invoice qualification.
Default demo reward	Referrer: INR 100 wallet credit. Referred customer: INR 100 wallet credit. Reward expiry: 30 days.
Fraud rules	Duplicate mobile, existing customer check, self-referral check, one customer referred once, first referral wins.
Rejected states	Duplicate, Invalid, Cancelled must be visible in prototype and reports.
Owner control	Minimum invoice, max reward per customer, expiry, and first paid invoice rules protect economics.

7. Prototype Screens

#	Screen	Must Show
1	Owner Onboarding / Setup Wizard	Business type, billing/POS connection, reward setup, trigger options, launch program.
2	Admin Dashboard	Total referrals, qualified referrals, conversion rate, rewards issued, revenue generated, top referrers.
3	Referral Program Settings	Settings -> Referral Program, reward dropdowns, trigger dropdown, channels, qualification rules.
4	Referral Invitation	ReferralInvitationService, WhatsApp/SMS/Email/App Notification, post-payment message.
5	Referral Form	Friend name, mobile number, optional email, add another friend, submit referrals.
6	Referral Submitted Confirmation	2 referrals submitted successfully; status Pending.
7	Admin Referral Record	Referral ID, referrer, prospect name/mobile/email, status, created date.
8	New Customer Journey Tracker	Pending, Contacted, Registered, Appointment Booked/Order Placed, Completed, Invoice Paid, Qualified, Rewarded.
9	Reward Distribution	INR 100 wallet credit to referrer and referred customer; status Rewarded.
10	My Referrals	Total referrals, pending, qualified, rewarded, wallet earned, referral list.
11	Fraud Checks	Duplicate mobile, existing customer, self-referral, one customer referred once, first referral wins, Invalid/Cancelled.
12	Referral Report	Referral ID, referrer/referred details, status, reward amount, created/qualified/rewarded dates, export.
13	Integrations / Plug-And-Play	ReSpark salon and Devourin restaurant cards; invoice/bill paid qualification.

8. Plug-And-Play Examples

Platform	Business Type	Flow
ReSpark-style salon software	Salon / Spa	Appointment completed -> invoice paid -> ReferralInvitationService -> customer submits friend -> friend registers/books/completes/pays -> rewards issued.
Devourin-style restaurant software	Restaurant	Order completed -> bill paid -> referral invitation -> customer submits friend -> friend places first order -> bill paid -> rewards issued.

Important: restaurant referral tracking works best when customer identity exists through QR ordering, digital receipts, delivery/takeaway, CRM capture, or phone capture at checkout.

9. Dashboards And Reports

- Admin dashboard: total referrals, qualified referrals, conversion rate, total rewards issued, revenue generated, top referrers.
- Customer portal: My Referrals menu with total referrals, qualified referrals, pending referrals, total rewards earned, wallet earned, referral list.
- Referral report columns: Referral ID, Referrer Name, Referrer Mobile, Referred Name, Referred Mobile, Current Status, Reward Amount, Created Date, Qualified Date, Rewarded Date.

10. CEO Approval Plan

- Approve ReferFlow as an independent plug-and-play referral module, not connected to MenuList or any existing product line.
- Approve the PDF-aligned 13-screen prototype.
- Use wallet credit as the active v1 demo reward while keeping other PDF reward types visible in settings.
- Keep referral links, QR, influencer, staff, tiers, branch campaigns, membership/package rewards, and cashback payouts as roadmap.
- Pilot first with salons/spas and identity-rich restaurants where paid invoice/order events can be verified.

11. Google Stitch Input

Use referflow-google-stitch-prototype-brief.md as the primary Google Stitch document. It is now stricter than the CEO PDF and includes the exact prototype instructions. The CEO PDF can be shared as supporting context only.

Final prototype sentence: Paid customer refers friend through a form -> friend completes first paid order/appointment -> invoice is paid -> rewards are issued -> admin sees revenue and reward cost.
